Ex-3

EXPERIMENTS ON CISCO PACKET TRACER

AIM:-

To study the Packet tracer tool Installation and User Interface overview.

1) From the network component box, click & drag and drop the below components

   a. 4 Generic PCs & one HUB

   ~~b. Select one of the PC and connect it into HUB~~

   b. 4 Generic PCs & one switch.

2) Click on computer

   * Click on copper straight through cable
   * Select one of the PC and connect it into HUB using the cable. The link LED should glow in green, indicating the link is up.

   Similarly connect 4PCs to the switch using copper straight through cable

3) Click on the PCs connected to hub, go to the desktop tab, click on IP configuration and enter an IP address and ~~select~~ subnet mask. Here the default gateway and DNS server information is not needed as there are only 2 end device is the network.

4) Click on the PDU from the common tool bar
   a. Drag & drop it on the PC and it on another PC connected to the HUB.

5) Observe the flow of PDU from source PC to destination PC by selecting the relative mode of simulation.

6) Repeat step # 3 to step # 5 for the PCs connected to the switch.

RESULT:-

CISCO PACKET TRAINER are learned and executed successfully.
